

Incorporating Tele-Rounding into Hospital Operations:

Tips for Leaders

Here are recommendations to ensure the successful implementation of tele-rounding into your inpatient operations:

1. Get an early start! Don't wait for the surge to begin.
2. Gain buy-in from C-Suite leadership, with the full support of your IT team.
3. Once approved, order the appropriate number of tablets, stands, and other equipment.
4. Create training manuals and conduct online and in-person training modules for all affected staff.
5. Perform a dry run with physician and nursing teams to test hardware, software, algorithm & logistics.
6. Engage your nursing staff and create a daily appointment schedule for patient rounding.
7. Be prepared to tele-round at other affiliated hospitals and ancillary sites.

The benefits of tele-rounding more than justify the investment:

Greater protection and safety for providers and patients.

Reduction in need for PPE.

Optimized clinical workflows.

Improved collaboration with nursing teams.
