

Platform for Acute Teleneurology

A Simple, Low-Cost Telehealth Platform Built to Expedite Patients' Time to Treatment

Our teleneurology technology was developed in partnership with hospitals and health systems to provide a cost-effective, secure way to expand acute neurology and neurohospitalist capabilities and ensure rapid response times.

Built to Be Simple, Intuitive, and Fast—Vituity's teleneurology platform quickly connects providers, patients, and their families with experienced neurology specialists via HIPAA-compliant HD video 24 hours a day.

Hospital administrators and care teams often prefer our software-based platform to premium products due to its streamlined features, speed, and cost-effectiveness.

Ease of Use—Once facility staff and the neurologist on call agree that a telehealth visit is appropriate, an acute neurology consult can be started in seconds. For facilities that leverage our neurohospitalist panel, the same system can be used to follow patients throughout their course of care and to round on patients.

- System launches at patient's bedside with just a few clicks.
- Remote camera controls allow the specialist to examine patients' neurologic functioning, completing all elements of the NIH assessment.
- High-quality connection allows for a natural interaction with providers, the patient, and their family, resulting in consistently high patient satisfaction.

To ensure your facility benefits from all aspects of our program, Vituity offers customized processes for our providers to access your EMR and PACS as necessary.

Straightforward Low Cost—We charge a simple monthly fee per facility for use of our software-based telehealth platform, no strings attached.

Our platform can be run on a basic workstation on wheels (WOW), consisting of a computer; cart; pan, tilt, zoom (PTZ) camera; speakers; and a microphone. We'll support you in selecting your hardware—which is typically less expensive than other systems and is owned by you. We do not charge for additional licenses within a facility, so it's inexpensive (and recommended) to have dedicated carts for acute and non-acute uses.

Vituity-Designed Solutions

Vituity's custom-built telehealth solution was developed by our acute care clinicians to address the real issues today's hospitals and facilities face.

It is designed to improve access to care, promote collegiality and teamwork in a variety of settings, and improve the experience for providers and their patients.

Through a collaborative process, we have customized our platform with unique instances to provide acute neurology, acute psychiatry, emergency care, critical care, skilled nursing, and urgent care services. We are continuously improving our platform and expanding our capabilities to serve the needs of our partners.

Get Started

Provide your patients with expert neurologic care with minimal start-up costs.
